EXPERIENCE

SK ON | Intern, AI & Digital Transformation | 2026.02-2026.04

- Developed a lubricant demand forecasting model
 - Improved forecasting performance using LightGBM with lag, domain, and customer-entropy features
- Designed a multimodal RAG system on Databricks
 - Built a pipeline for chart/diagram-heavy reports: VLM-generated image descriptions → text embeddings → answers grounded in the original images
 - Automatically generated evaluation questions and performed auto-grading with a multimodal LLM to quantitatively measure RAG success rate

Generative Lab | Software Engineer | 2025.06-2025.08

- Implemented automated handling of delivery tracking, returns, and exchanges in AI customer support by integrating the CJ Logistics API
- Built a large-scale AI chat log analysis pipeline processing 100K+ monthly conversations
 - Designed an automated pipeline: RDS (chat logs) → AWS Lambda (CoT-based analysis) → Google Sheets
 - Restructured the dashboard by conversation type and handoff reasons to quantitatively diagnose weak points of the AI model

PROJECTS

Dynplayer: Music Recommendation System (personal) | <https://dynplayer.win>

collected playlists as user sequences to learn graph embeddings and a Two-Tower model

- **Recommendation**
 - Designed and deployed a recommendation system over 80K tracks (HNSW vector search)
 - Defined playlists as user–item interactions and generated track embeddings via SimGCL
 - Implemented a Two-Tower model that recommends based on user sequences
 - Performance: Recall@10 0.2298 / NDCG@10 0.1367
- **Keyword Search**
 - Implemented natural-language music search with a CLIP-inspired Two-Tower (Query–Track) architecture, mapping text queries into the music embedding space for retrieval
 - Applied MMR-based

AI Festival (Mirae Asset × NAVER CLOVA)

- Awarded Excellence Prize (~~₩~~5,000,000)
- Developed a financial AI system to mitigate filter bubble effects

DACON CTR Prediction (Toss)

- Ranked 43rd out of 726 teams (Top ~6%)
- Modeled complex feature interactions in sequential data using LightGBM, Bi-LSTM, and DCN

EDUCATION

Yonsei University | 2020.03 – 2026.08

- Bachelor of Industrial Engineering
- YBIGTA DS, Lead of Education

SKILLS

- **Languages:** Python, SQL
- **ML/DL:** PyTorch, HuggingFace, LangChain
- **Data/Engineering:** Pandas, NumPy, Scikit-learn
- **Backend/API:** FastAPI, Uvicorn, Supabase(pgvector), Cloudflare Pages, GitHub Actions(CI)
